**EDIBLE SALT OF LIQUID TYPE, AND THE PROCESSING METHOD OF IT**

**Abstract**

The present invention relates to edible salt seasoning of liquid type containing 73-75% water, 24-26% edible salt and 1-3% chitosan. The edible salt seasoning of liquid type is prepared by mixing acetic acid saturated with 1-3% chitosan with a solution of edible salt dissolved 24-26% edible salt in 73-75% water. Because the edible salt seasoning of liquid type exists in soluble form, it easily controls the concentration of salt, has no closure of discharge port of container, and has an effect of improvement in digestive power by chitosan.
